

Wellcome To TenX
If you don't buy it today, you'll
buy it more expensive tomorrow

TENX

Market problems:

All people dream of making big profits from small investments, but the market for highly profitable instruments today is full of shortcomings, the main ones of which:

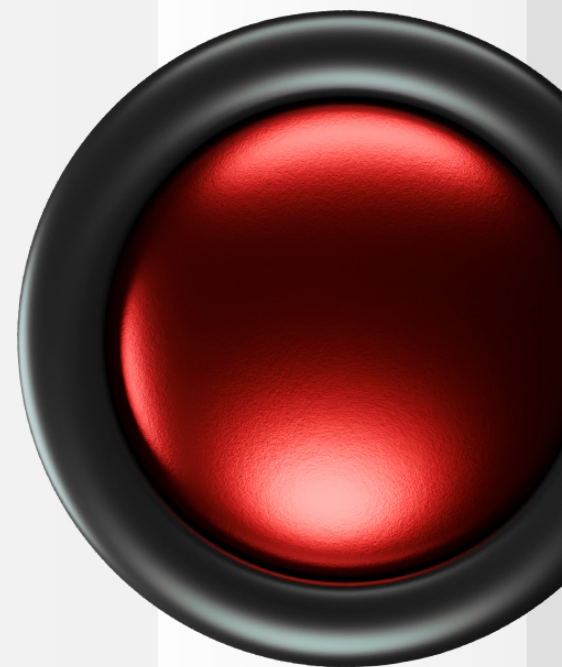

In most projects, only referral leaders earn money, since they enter first;

In many projects, partner rewards are so small that there is no motivation to build network;

95% of projects that give "XXX" are closed in the first 3 days, and participation in them is comparable to playing casino.

TenX Solutions

We have created a concept that takes into account all the shortcomings of the market and creates truly the best conditions among all existing offers for both investors and leaders.

Both at the start of the project and subsequently, all partners will have equal chances to purchase the TenX token. No exceptions, whitelists or admin tokens.

At the same time, the marketing plan works for ALL partners, even those who have not purchased TenX tokens. Partners who have not purchased tokens receive access to a linear bonus and a minimum binary limit (no more than 10% from a smaller branch).

The mathematics of the project is designed in such a way that it combines both "X's" and long-termism. We are the first in the market who were able to do this.

Mechanics of the TenX

Incoming funds are divided into two parts:

50%

TOKEN LIQUIDITY

*Founders' income - 10% commission on withdrawals.

50%

MARKETING PLAN

Mechanics of the TenX

The token price starts at \$1 and grows by \$0.01 from each purchase

Immediately after the purchase, the user's tokens are frozen, unfreezing occurs every 24 hours at 3% (on the last day - 1%, a total of 34 days), and they can be sold at the current rate

Height limit is x10. That is, if you bought TenX for \$1, and now the rate is \$20, then you cannot sell unfrozen tokens for more than \$10.

Minimum and maximum purchase limits are set manually.
You can find up-to-date information in our official resources.

TenX Marketing Plan

The TenX system provides two types of rewards: Binary and Linear

The linear reward is paid at the time of purchase and is 10% from personally invited users.

The binary bonus works according to a strict mathematical formula and cannot include more than 40% of the volume included in the project. Paid every 24 hours and calculated using the formula:

40% OF THE AMOUNT OF ALL PURCHASES / AMOUNT IN ALL SMALLER BINARY LEGS

PRACTICAL EXAMPLE:

Let's assume that \$50,000 has been invested to the project today. And in all smaller binary legs for all partners, for example, the volume is \$40,000. 40% of the amount entered into the project is \$20,000. When dividing \$20,000 by \$40,000, we get a coefficient of 0.5. This means that the binary bonus today will be 50% from the smaller leg.

Binary limits are set manually.

You can find up-to-date information in our official resources.

Advantages of TenX

As you have already understood from the presentation, we have created a truly unique product:

It is both super-highly profitable and long-term
(in the first five days the rate increased by 700% of the
initial price, and lockups and limits give us reliability)

At the same time, it is interesting for both the leader and the investor without a team
(huge marketing checks keep pace with colossal profits on investment)

Allows anyone to earn huge money even without investments
(binary and linear bonuses work even for partners
who have not purchased TenX tokens)
